

## **CAME ENHANCES ITS PRODUCT RANGE FOR RESIDENTIAL AREAS WITH THE NEW VERSION OF BXV, THE AUTOMATION FOR SLIDING GATES WITH EVEN MORE ADVANCED ELECTRONICS**

*The new BXV Plus, enhanced with Adaptive Speed & Torque Technology, is native CXN BUS for quick and easy connection of devices such as control switches and safety accessories*

**CAME**, a leading Made in Italy company in the automation, active security and automatic access control sector, has enhanced its offer for residential areas by launching BXV Plus. The latest automation version for sliding gates has even more advanced electronics that make it easy to install, as well as practical to manage, thanks to its compatibility with BUS accessories such as flashing lights, control switches and safety accessories. An automation system with BXV Plus provides feedback from each accessory connected to the system for easier and faster maintenance.

The new BXV Plus, available in three versions depending on the size of the sliding gate (400 kg, 600 kg and 1,000 kg), enriches and expands the range of automation systems in this line. Thanks to the new electronic board, BXV Plus is even more powerful and offers new functions that benefit not only the installer, but also the residents themselves. Through CAME's Connect technology, for example, the motor can be programmed in a guided manner via its own display or through a smartphone, making configuration safe, convenient and fast. Thanks to the option of connecting a Wi-Fi gateway, BXV Plus can also connect to any router to enable remote management via the Automation App. This means it can be controlled both from a smartphone and using Amazon Alexa voice commands to open and close the gate, stop it or find out its status.

Thanks to Adaptive Speed & Torque Technology, enabling the control of travel speed and slowdown, BXV Plus ensures greater safety in the event of obstacles, as well as the correct detection of friction problems - caused by dirt or small stones on the gate track. Finally, this function ensures that the motor can operate perfectly in all weather conditions.

### **CAME**

CAME is a leading brand and global partner for integrated solutions for the automation, control and security of residential, public and urban environments. Its solutions are designed to create smart spaces that improve people's well-being. The Group designs and produces automation for entrances, video entry systems, climate control, home automation and burglar alarm systems, and sectional doors for residential and industrial settings. It also provides solutions for large-scale projects and for urban planning, systems for managing automatic parking facilities, access control and security of public areas.

With 50 years in the business, and even more experience through the companies that are now part of it, the Group founded by Paolo Menuzzo, today President of the CAME Group holding company, is headquartered in Dosson di Casier in the province of Treviso, and has 11 production plants in Italy, France, Spain, England, Turkey and Brazil. Andrea Menuzzo, the founder's son, is the President of CAME S.p.A. The company has 1,750 employees, branches in 20 countries and thanks to its business partners and distributors, operates in 118 countries worldwide. In 2021 it generated a turnover close to 260 million Euros.
