

INNOVATION, CONNECTIVITY AND PROFESSIONALISM CAME PRESENTS ITS COMPLETE OFFERING AT SICUREZZA 2023

Ranging from bollards for high safety, to shallow mount road blockers resistant to impacts at 80km/h, from MATTER certification for an increasingly connected future, to "Progetto Spazi" for all-round, customised consultancy.

CAME, a world-leading "Made in Italy" company in the field of integrated solutions designed for the automation, control and security of residential, public and business settings, is back in the spotlight at **Sicurezza 2023 (Hall 7 – Stand M01-M09)**. Presenting itself as the ideal technological partner with its comprehensive range of products, innovations and know-how for the creation of automated spaces and projects capable of simplifying and improving their use, and meeting the needs of professionals in the security sector.

For this reason, CAME will be present at the preview with its "**Progetto Spazi**" team, specialists dedicated to its partners with different professional skills and a single objective: to help business-partners implement technological projects simply, quickly and efficiently, relying on a national network of more than 60 technical assistance centers. This team of specialists offers support and advice, integrates technology and service in every type of space and project, and understands customers' needs by designing together with them the most effective tailor-made solutions for the entire project, from planning, engineering to after-sales. A global approach that creates added value for everyone: from distribution players to installation companies and planners.

Sensitive Site Security

In some cases, sensitive sites such as airports, stadiums, stations, museums, large open public spaces and government sites require a highest and most sophisticated level of protection and security. Consequently, CAME at Sicurezza 2023 will be presenting its complete offering for these specialist areas, including the **high-security bollards** that the Treviso-based company has installed in some of the world's most famous areas and squares, such as the Promenade in Nice and the Place du Casino in Monte Carlo, where access is limited according to urban planning ; as well as stations, including Roma Termini and Tiburtina, and European museums, like the Museum of Modern Art in Oslo.

The **HRB shallow mount road blocker**, which withstands impacts at a speed of 81.4 km/h from vehicles weighing up to 7,350 kg and remains fully functional, will also be on display at the stand. It has passed crash tests and obtained ASTM F2656-18 C750, IWA 14-1:2013 Road Blocker V/7200[N3C]/80 and PAS68:2013 Road Blocker V/7500[N3]/80 certifications. This raises up to 45°, and is only 400 mm deep, making the installation process faster, and reducing costs. It is ideal in urban and metropolitan settings because it is durable and withstands intense cycles of use and stress. The system, under standard conditions, requires between 3 to 6 seconds to activate while, for particularly sensitive sites, it can open in just 1.5 seconds. These characteristics make it particularly suitable for specific and limited access points and it has been chosen for the protection of certain sensitive areas in several countries around the world.

Access control and management

CAME will also be presenting **ACS01** at the trade fair, its solution for managing vehicular and pedestrian entrances, particularly suitable for complex systems with multiple entrances. This innovative, easily expandable modular system can control multiple accesses simultaneously and manage up to 10,000 users per site. Its features mean that it is flexible and practical, and able to adapt to a variety of settings.

The company's complete range of turnstiles will also be on display, including the full-height **BTX300**, which provides very high levels of security in the management of pedestrian entrances in stadiums, construction sites and sensitive sites requiring increased security.

Then there is the bi-directional motordriven **PG03** speed gate, with hinged leaves and steel structure, its status indicators on the sides and passage indicators on the top, make it a solution that responds promptly to the needs in high flow zones in busy environments without compromising design.

In order to control temporary access to active environments such as B&Bs, hotels, campsites, gyms, coworking spaces and much more, CAME proposes the new **Quick&Easy Access**, the innovative system that allows real-time management of entrances and exits remotely, and that can be installed simply and quickly compared to traditional systems, guaranteeing a wide range of functions that improve the services offered to guests, while providing a smart solution for managers.

Automatic barriers

The entire range of **automatic barriers**, from brushless versions to the latest addition, namely the **GARD LS4** version, will also be on display at the CAME stand. High opening speeds from 1-2 seconds for safe entry, Advanced Speed Control and CONNECT technology are among the advantages offered by the range.

Flashing lights

The **KRX** flashing light, in its **innovative CONNECT version**, brings together CXN BUS technology with wireless connectivity, connecting the automation system and allowing access, harnessing the internet and the CAME Cloud. It enables all the advanced services offered by this technology, such as the remote control of the automation system at any time via the CAME App or Alexa smart speaker.

Residential

The company is constantly in step with the latest innovations in the markets it serves, and as such the smart home. This is demonstrated by the fact that it was one of the pioneers in its field to obtain **MATTER certification**. This protocol allows all automation and technology from different manufacturers inside and outside the home to be connected and controlled by a single app or smart speaker, quickly, safely, and easily. Visitors to the fair will also be able to discover **BXV Plus**, the new version of the automation for sliding gates defined by advanced electronics that make it easy to install and manage, through its compatibility with BUS accessories such as flashing lights, control selectors and safety accessories. An automation system with BXV Plus provides feedback from each accessory connected to the system for easier and faster maintenance.

Video entry systems

Keeping an eye on smart home and on access management in residences and offices, CAME also presents **PLX**, the hands-free video entry system that with its built-in Wi-Fi module, is able to connect directly to the home router and dedicated App. This allows users to answer the video intercom call, open the house gate or the front door, directly from their smartphone and with no distance limits: at home, in the garden, in the office, even while on holiday. Also on display is **LHS**, the video entry panel which is ideal for single houses or small units, offers robust design and technology which is easy to install.

The multinational company based in Treviso achieved a turnover of 298 million Euro in 2022 and employs more than 1,800 people. It serves the market with 29 branches and more than 40 warehouses around the world, operating in 110 countries worldwide through partners and distributors with an integrated and global vision. The most recent international projects implemented include the automation system at the entrance to several stadiums in Qatar, the automatic bollards at the

Museum of the Future in Dubai, and the very recent parking management system at Europe's largest amusement water park, Suntago Water World Park, in Poland.

CAME

CAME is a leading global brand for high-quality technological solutions and products for automations, smart homes, access control and security and parking systems that can improve the lives of the people who use them and of working professionals.

With more than 50 years of history behind it, and even longer experience thanks to the companies that now belong to it, the Group founded by Paolo Menuzzo, now President of the holding company, is headquartered in Dosson di Casier, in the province of Treviso, and owns 10 manufacturing sites in Italy, France, Spain, UK, Turkey, and Brazil. Andrea Menuzzo, son of the founder, is the Chairman and CEO of CAME S.p.A. The company has over 1800 employees, serves the market with 29 branches and more than 40 warehouses around the world, and operates in 110 countries worldwide through partners and distributors with an integrated and global vision. In 2022 it generated a turnover of 298 million Euro.
